1.Introduction

1.1 Project Title

The title of our project is “**Grow Green.**” This title represents our aim of encouraging students and lecturers to grow plants and protect the environment. The word “**Grow**” shows planting and caring, while “**Green**” represents nature and a healthy environment.

1.2 Introduction

A greener environment begins with one small step. With this idea in mind, our team carried out the **Grow Green** project on our university premises. The main purpose of this project was to spread awareness about the importance of plants and encourage our university community to take part in protecting the environment.

As part of this project, we distributed **50 plants** among students and lecturers. Each plant was not just given as a simple gift, but as a reminder that every individual has a responsibility to care for nature. Through this activity, we wanted to show that even a small action, such as growing and maintaining a plant, can contribute to a healthier and more beautiful environment.

In today’s world, environmental problems such as pollution, climate change, and loss of greenery are increasing day by day. Because of this, it is important for young people to understand the value of nature and take action to protect it. The **Grow Green** project gave students and lecturers an opportunity to be part of a meaningful environmental activity.

The project was successfully conducted with the support and participation of the university community. Many students and lecturers received the plants with interest and appreciation. This positive response made the project more meaningful and encouraged us to continue promoting green practices in the future.

Overall, **Grow Green** was a simple but valuable project that helped us promote environmental responsibility, teamwork, and awareness among students and lecturers. It reminded us that when we care for one plant, we also caring for our future.

2.Objectives of the Project

2.1 Main Objective

The main objective of the **Grow Green** project was to promote environmental awareness among students and lecturers by distributing plants within the university premises. Through this project, we aimed to encourage the university community to understand the importance of plants and take responsibility for caring for nature. This project also focused on motivating individuals to make small eco-friendly actions in their daily lives. Overall, the main goal was to support a greener, cleaner, and healthier university environment.

2.2 Specific Objectives

The specific objectives of the project were:

1. To encourage students and lecturers to plant and care for trees or plants.
2. To promote environmental responsibility within the university community.
3. To increase awareness about the importance of greenery.
4. To support a clean and eco-friendly university environment.
5. To motivate young people to take small steps towards protecting nature.

2.3 Importance of the Project

The **Grow Green** project is important because it encourages students and lecturers to understand the value of plants and their role in protecting the environment. Plants help to provide oxygen, reduce pollution, improve air quality, and make the surroundings more beautiful and peaceful.

This project also helped to create environmental awareness within the university community. By distributing **50 plants**, we encouraged everyone to take a small but meaningful step towards nature. Even though the project was simple, it carried an important message that protecting the environment starts with individual responsibility.

Overall, the project supported the idea of building a greener and healthier university environment while motivating students and lecturers to care for nature in their daily lives.

3. Project Activities

3.1 Planning Stage

Before conducting the project, our team discussed the purpose, target audience, and method of plant distribution. We decided to distribute 50 plants among students and lecturers in the university premises.

The team planned how to collect or purchase the plants, where to distribute them, and how to explain the importance of the project to the participants.

3.2 Implementation Stage

The project was implemented inside the university premises. We distributed plants to students and lecturers and briefly explained the importance of taking care of plants.

The participants showed interest and appreciation towards the project. Many students and lecturers accepted the plants happily and supported the idea of making the environment greener.

3.3 Resources Used

The main resources used for this project were:

Resource	Quantity / Details
Plants	50 plants
Location	University premises (Turret Tower Hall No:403)
Participants	Students and lecturers
Team members	41 Members
Other materials	Bookmarks, Photo Booth Props, Photo Booth

3.4 Target Group

The target group of this project was mainly:

- University students
- University lecturers
- University community members

4. Outcomes and Benefits

4.1 Project Outcomes

The **Grow Green** project was successfully completed by distributing **50 plants** among students and lecturers. The project helped to create environmental awareness and encouraged participants to take care of plants.

The project also helped us to understand the value of teamwork, planning, communication, and social responsibility.

4.2 Benefits of the Project

The main benefits of the project were:

1. It created awareness about environmental protection.
2. It encouraged students and lecturers to grow plants.
3. It helped promote a green culture inside the university.
4. It improved teamwork and communication among project members.
5. It motivated participants to contribute to nature.

4.3 Challenges Faced

During the **Grow Green** project, we faced a few challenges such as arranging 50 plants, managing time, and organizing the distribution process within the university premises. It was also important to make sure that the plants were given properly to students and lecturers without confusion. Coordinating with team members and selecting suitable time for the activity required proper planning. However, through teamwork and good communication, we were able to overcome these challenges and complete the project successfully.

4.4 Lessons Learned

Through this project, we learned that even a small activity can create a positive impact on the environment and the university community. We understand the importance of plants and how individual responsibility can contribute to protecting nature. The project also helped us improve our teamwork, planning, communication, and organization skills. Most importantly, we learned that environmental protection begins with simple actions, such as planting and caring for one plant.

5. Conclusion

The **Grow Green** project was a successful environmental awareness project conducted within the university premises. By distributing **50 plants** among students and lecturers, we were able to encourage the university community to take part in protecting the environment.

This project helped us understand that environmental protection does not always require big actions. Small steps, such as planting and taking care of plants, can also make a meaningful difference.

Overall, the project achieved its objectives and created a positive impact among the participants. We believe that projects like this should be continued in the future to build a greener and healthier environment.

6. Budgeting

The budget for the **Grow Green** project was planned and managed by our group members. Since this was a group project, we collected a small amount of money from each member to cover the expenses needed for the project. The collected amount was mainly used to purchase the plants and prepare the additional materials required for the distribution.

The main expenses of the project included purchasing **50 plants**, transportation, bookmarks, photo booth props, and other small materials used during the project. By collecting contributions from all group members, we were able to manage the cost fairly and complete the project without financial difficulty.

No.	Item	Quantity / Details	Cost
1	Plants	50 plants	Rs. 15000.00
2	Transport	Plant transportation	Rs. 1000.00
3	Bookmarks	For distribution / awareness	Rs. 2000.00
	Total Cost		Rs. 18000.00

Overall, the budgeting process helped us understand the importance of financial planning, teamwork, and sharing responsibilities equally among group members.
